

YACHT LIGHTING

Dichroic Downlights Range

All new designs for our dichroic downlights have improved features, thermal control and finishes. The big debate is whether to relamp from the front or back. Relamping from the front is always fiddly and there is generally a clip or small ring to loose or struggle with. We have decided to go for making the job easy – smooth coil type ceiling springs and a simple squeeze clip to retain the lamp. This means the fittings are smaller and better looking from the front and we can incorporate a black aluminium anti-glare baffle which also reduces heat on the baffle to protect delicate ceiling materials and lacquers.

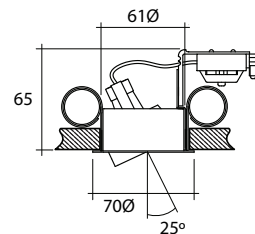

1022

Fixed downlight for 35mm diameter MR11 lamps 10, 20 or 35W

1025

Adjustable downlight for 35mm diameter MR11 lamps 10, 20 or 35W
Tilt 25° – Rotation 350°

YACHT LIGHTING

Options for 1022, 1025, 1006 and 1009

Suffix

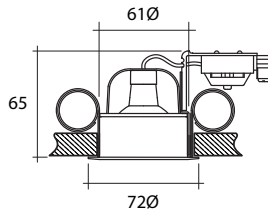

Bezel colour

Powdercoated white /
black / polished brass / chrome / gold plated
