

LD26 & LD26A

High Power Linear Reflector LED System

Data sheet - Page 1

LD26 comes in two versions. A symmetric 82° reflector (LD26) and the LD26A with an asymmetric reflector tilted at 8deg. By mounting the LEDs within a linear reflector, there is no uneven spotting from lenses or loss of output from just using the LED itself. Designed with the latest LED technology to create a continuous wash, the LED spacing is maintained across multiple lengths, so no dark spots! It offers great flexibility to the designer, with a range of options that suit most applications, details and project budgets.

Key Features

- Superb continuous lighting capabilities
- Maintained LED spacing across multiple lengths
- Reflectors focus the light to where it is needed
- Custom made lengths as standard, up to 2.1m
- Linked version available for curved applications
- High power for its compact size
- Available with Switched, 0-10V, DMX or Dali drivers
